Delta-Report

New Model:	3121, 3122, 3124
Reference model(s)	3123
Covered report	EMC
Date:	07.10.2019

Notes:	This report shows why the test results of the reference model can be considered to be same for the new model.
--------	---

Reason why results of the tests can be considered to be identical for both models:

The 3121, 3122, 3123 and 3124 models are all using the same layout. They only are slightly different in functions. Because of that, each model has a little bit different assembly plan. Only for 3123 all functions are available and so only for this unit, all components are assembled:

3123:

- Voltage test 12-1000V
- Magnetic-field test
- Optical and acoustical showing
- Torch light

3121: no magnetic field test

3122: no voltage test

3124: no torch light

Due to the fact that the PCB for all units is the same and only some components are missing for models 3121, 3122 and 3124, all 4 models pass the EMC-test.
